Practical Task 5: Front Brake Pad Replacement, Job Report

You replaced the front brake pads on a shop vehicle during lab. Write a job report of 600 to 800 words about the job. Use a cover page with your name, student ID, course and date. Use headings.

Your report must include

1. Vehicle information (year, make, model, mileage) and the customer complaint.
2. Safety precautions you followed.
3. Tools and equipment used.
4. Step by step procedure, including the torque specs you used.
5. Measurements: pad thickness before replacement and rotor thickness compared with the minimum spec. Put the measurements in a table.
6. **At least three photos from your lab work:** the worn pads next to the new pads, measuring the rotor with the micrometer, and the finished installation. Give each photo a figure number and caption.
7. A hand drawn sketch of the caliper assembly with the main parts labeled (scan or photograph it).
8. A short reflection: what went well and what you would do differently.

Grading: content 50 %, photos and sketch 20 %, organization and writing 30 %.
